

CryoPen treats all benign skin lesions!

Warts

Pigmented spots

Cherry angiomas

Sun spots

Seborrheic Keratoses

Skin tags & more!

FAQ'S

Can anyone have the treatment?

Yes. However, skin types and location should be considered carefully prior to treatment.

Can children have CryoPen treatments?

Yes. However, parental consent is required.

Is the treatment painful?

At a penetration rate of 1mm per 5 seconds, the ice will reach the caudal extent of the lesion after a given amount of time related to the depth of the lesion. From that moment, the patient will experience a pain sensation. This may be the moment to stop treatment. There might be a little residual stinging for a few minutes after treatment.

What do patients experience during treatment?

Generally, little or no discomfort is experienced during the first few seconds when you manage to avoid treatment of healthy tissue.

What follow-up is necessary?

Follow-up should be scheduled in 2/4 week intervals to observe the results, and for further sessions if required.

Cryosurgery Treatment

Removal of benign skin lesions

Treatments are
clinic based
or in the comfort of
your own home

What is Cryotherapy?

Cryotherapy or Cryosurgery is a highly effective and safe procedure that is used to freeze and destroy benign skin lesions.

It uses liquefied nitrous oxide to destroy the tissue by freezing the cell fluid which in turn forms ice shards that rupture the cell membrane in turn destroying the cell and lesion.

Cryotherapy is beneficial as it is quicker than other treatments and patients can be in and out in seconds. It requires no anaesthesia and has minimal scarring. There are no limitations on activities (except protecting the area from damage or abrasions) and patients can return to normal activities after treatments.

The CryoPen

The Cryopen is a unique pen-like device allowing for more targeted treatments, meaning no healthy tissue will be affected during treatments.

Benefits of Cryopen

VERSATILE TREATMENT OPTIONS

Treats lesions from 1mm to 10mm in size

FAST TREATMENTS

Treats a 2mm lesion in 10 seconds

SAFE FOR DELICATE AREAS

Treat lesions on face and close to the eye area

PINPOINT ACCURACY

Doesn't cause damage to healthy tissue

MINIMAL DISCOMFORT

Little to no discomfort during or after treatments

NO DOWNTIME OR HOMECARE

No limits on activity except for protecting treated area

Treatment Method

FIRST FREEZE CYCLE

The clinician will hold the applicator as close as possible to the lesion, and move it quickly towards and away from it.

Depending on the lesion size and depth, the treatment could be 1 to 30 seconds.

THAW

After the first freezing cycle, the tissue will be allowed to thaw for about 30 seconds.

SECOND FREEZE CYCLE

Cryopen Cryotherapy can treat all common benign skin lesions including age spots, warts, skin tags, verrucas, cherry angiomas and many more.

Results in as little as one treatment

The Cryopen delivers exceptional results for the complete removal of all benign skin lesions in as little as one treatment session!
